Our Mission

Green Mountain College prepares students for fulfilling lives by taking the goal of creating just and sustainable societies as the unifying theme for its interdisciplinary graduate and undergraduate liberal arts education. The College fosters the ideals of environmental and personal responsibility, civic engagement, entrepreneurial spirit, and global understanding.

Green Mountain College offers four master's degrees: A master of science in environmental studies (MSES), a master of science in resilient and sustainable communities (MRSC), a master of science in sustainable food systems (MSFS), and a master of business administration (MBA) in sustainable business. All programs are offered through a web-based distance-learning model that allows students to live at home and carry on a full-time career while working toward their degrees. Our graduate programs emphasize professional development through applied skills while building a secure foundation of theory.

M.B.A. in Sustainable Business

Green Mountain College offers an accredited M.B.A. that emphasizes sustainable business practices. Students learn how to achieve their economic objectives while addressing the needs of the environment, employees, community, and other stakeholders. Our program reflects the growing trend among successful companies to focus on the triple bottom line, seeking competitive advantages through practices that are succeed economically, are socially responsible, and environmentally sound.

The normal time expected to complete your degree is two years, which includes two brief residencies which are strongly encouraged but not mandatory at our Poultney, Vermont campus.

Our program provides M.B.A. students with a solid foundation in the core areas of business administration, including finance, accounting, marketing, organizational leadership, business law, operations, quantitative analysis, and ethics. But we go a step further, grounding this knowledge in the connections between an organization’s financial, social and environmental performance and encouraging students to apply their learning in their current career.

As one of the nation’s pioneer environmental liberal arts colleges, Green Mountain is especially well prepared to produce business leaders who are able to focus on success – without losing sight of the bigger picture.

M.S. in Environmental Studies (MSES)
As one of the nation’s pioneer environmental liberal arts colleges, Green Mountain offers an excellent opportunity to pursue graduate studies at home. Our online program, accredited by the New England Association of Schools and Colleges, is ideal for working professionals, allowing you to earn your graduate degree while earning a full-time income. Its emphasis on practical application of knowledge will prepare you for professional work, whether you’re just launching your career or looking for growth in an established position.

Our MSES program is distinctive in its bioregional focus; you are asked to apply the skills and knowledge you are learning to issues and ecosystems in your local area. This enables you to go beyond conventional education and learn to identify and solve problems in your own community. Your classes will typically begin with a case study, then move to a relevant theory, before asking you to apply the theory to issues in your local bioregion.

Students in this program can expect to gain a solid foundation in environmental science, law, policy, and organizing principles. You will have ongoing interaction with the College’s excellent faculty in disciplines as diverse as history, biology, business and economics, geology, communications, philosophy, law, education, English, and natural resource management.

The normal time expected to complete this degree is two to three years, which includes two brief residencies at our Poultney, Vermont campus. Although these are strongly encouraged, they are not mandatory as many of our graduate students are employed.

M.S. in Resilient and Sustainable Communities (MRSC)

From urban areas to small towns, citizens are rethinking traditional approaches to providing food, energy, transportation and governance in response to rapid environmental and economic changes. As we adapt to conditions brought about by a changing climate, depletion of fossil fuel supplies, and growing inequalities in wealth and access to vital resources, the MRSC program gives students the skills to develop, advocate, and implement fundamental changes in how communities function.

At the heart of this program is the understanding that sustainability depends on creating resilient communities, which can adapt to changing conditions in ways that allow them to evolve without losing their fundamental identities. In this program students will synthesize knowledge about land-use planning, economic development, energy production, food systems, and resource management, while developing skills in leadership, group organization, and conflict resolution.

Green Mountain College’s MRSC program is unique, designed to help students apply what they learn in each class to their own communities, wherever they may live, and to hear from classmates how the same concepts may take different forms in various settings. The applied emphasis of our online graduate programs is a natural expression of our
college, which features a culture and curriculum deeply rooted in social, environmental and economic sustainability.

M.S. in Sustainable Food Systems (MSFS)

In today’s world of complex food and agriculture systems, we need leaders. Our Masters in Sustainable Food Systems program prepares future leaders in the burgeoning food movement with a graduate level interdisciplinary understanding of sustainable agricultural production, and a deep knowledge of the economic, ecological, and social forces driving food systems.

At Green Mountain College, we’ve been teaching about sustainability for over fifteen years. Our distance MSFS program – built on the success of the College’s undergraduate major in sustainable agriculture and on the surging interest in food and agriculture in the U.S. and beyond – is fully accredited by the New England Association of Schools & Colleges (NEASC), and is designed to provide students with the skills to conduct in-depth interdisciplinary investigations into the complex arena of their own bioregional food systems. Our MSFS students graduate with the knowledge and confidence to become leaders and join a cutting-edge community ready to make a difference.

The Academic Program

Master of Business Administration

Program Director: Karen Fleming Heidelmeier
Professor of Sustainable Business
Director of the Master of Business Administration Program

The M.B.A. requires 37 hours of Green Mountain College graduate credits, which draw sustainability principles in business and utilize numerous case studies that exemplify the concepts and practice of sustainable business.

Learning Outcomes for the MBA Program

Through the MBA program, students will:

1. Acquire a solid foundation in the core areas of business administration, including finance, accounting, marketing, organizational leadership, business law, and ethics; while grounding that knowledge in the relationships that define the communities in which they live and work.

2. Gain the knowledge to achieve economic objectives while addressing the needs of employees, their community, and other stakeholders by focusing on the triple-bottom-line.

3. Demonstrate the ability to understand the environmental and social context in which economic activity takes place.
4. Acquire a thorough understanding of contemporary issues, theories, and skills related to their area of focus within sustainable business.
5. Demonstrate their mastery of the above through completing an approved Capstone Project.

Students’ achievement of the above learning outcomes will be assessed through the following:
1. By successfully completing each of the relevant courses (BUS 5110, BUS 5080, BUS 5050, BUS 6010, and BUS 5090) students will show that they have achieved this learning outcome.
2. By successfully completing each of the relevant courses (BUS 5020, BUS 5030, and BUS 6020) students will show that they have achieved this learning outcome.
3. By successfully completing each of the relevant courses (BUS 5070) students will show that they have achieved this learning outcome.
4. During the capstone courses students incorporate contemporary issues, theories, and skills related to a specialized area of interest within sustainable business. By successfully completing each of the relevant courses (BUS 6090, BUS 6091) students will show that they have achieved this learning outcome.

Admission to the M.B.A. program will be based upon a review of the following criteria:

- Transcripts from each college or professional school previously attended, where applicable indicating degrees earned (a GPA of at least 3.0 is preferred). Bachelor’s degree required.
- Current resume.
- Letters of recommendation from three individuals who are not relatives and can provide a well-rounded perspective of candidate’s background and character. Recommendations can be based on any combination of professional, academic and/or personal relationships; however, the recommendations should address student’s capabilities for graduate education, leadership and management. Recommenders may email letter to mastersprogram@greenmtn.edu as a Word or PDF document or mail the original signed letters directly to GMC.
- A personal essay. The personal statement is an opportunity to describe to the Admissions Committee the following; (1) Why the student would like to pursue a GMC MBA; (2) How the advanced degree will fit into achieving the student’s career goals; and (3) How will the student manage competing personal, professional, and academic priorities during their advanced course of study?
- GMAT or “Assessment of Quantitative Skills” essay. Ideally, applicants will submit the results of the Graduate Management Admissions Test (GMAT) taken within the last 5 years. Alternatively, applicants may submit a quantitative skills assessment, including (1) a list of college-level math, statistics, economics, finance,
and accounting courses; (2) a listing of quantitative skills currently used in their work; and (3) a description of their experience with spreadsheet and/or other math-related software.

**Note:** The M.B.A. program features a rolling admissions policy. Those interested in enrolling can apply at any time during the year.

Materials may also be sent electronically to mastersprogram@greenmtn.edu. Please make sure the subject line of an electronic application specifies 'Application for MBA Admission'.

The online application for the MBA program is available at masters.greenmtn.edu.

**Application materials should be sent to the following address:**
Office of Graduate Programs  
Green Mountain College  
One Brennan Circle  
Poultney, VT 05764

The graduate studies candidates will be notified upon completion of their application and the appropriate Admissions Committee will then review their application. If the committee requires additional information the candidate will be contacted with that request. Upon acceptance the candidate will be notified and sent the documents needed to enroll.

**Total credits for a Master of Business Administration:** 37
Master of Science in Environmental Studies

Program Director: Meriel Brooks
Professor of Biology
Director of the Master of Science in Environmental Studies Program

The environmental studies M.S. requires 36 hours of GMC graduate credits. Twenty-one of those credit hours represent a common core of courses that provides a background in the major fields associated with environmental studies.

Building on this core are two concentrations: Conservation Biology and Writing & Communications. In exceptional cases, students may also chart their own course through a self-designed concentration, arranged in consultation with the Program Director.

The MSES has both a thesis and a non-thesis option. For the thesis option, students complete a significant work: either an academic thesis or an applied professional project. The non-thesis option requires compilation of a professional portfolio demonstrating competencies in the learning outcome areas below.

**Learning Outcomes for the MSES Program**

Through the MSES program, students will:

- Acquire and demonstrate a solid foundation in environmental science, history, philosophy, law, policy, and organizing principles.
- Analyze contemporary environmental issues
- Demonstrate understanding of the theories related to their area of focus in environmental studies.
- Develop and demonstrate through projects a suite of sophisticated skills related to applying theoretical knowledge to problem-solving in a community.

**Admission to the Master of Science program will be based upon a review of the following criteria:**

- All undergraduate and graduate level transcripts (a GPA of at least 3.0 is preferred). Bachelor's degree required.
- Current résumé, or C.V.
- Three letters of reference
- A portfolio that demonstrates interest and/or experience in the proposed field of study: Portfolios may include relevant research, artwork, writing samples, and any other material that might help the Admissions Committee determine the applicant's ability to meet with success in the proposed field of graduate study.
- 500-word essay that identifies the applicant in the following ways: professional and/or academic interest in pursuing the degree; academic and experiential preparation; expectations of the program; and a sense of how this graduate program might be contextualized by the natural and social environments in which the student lives.
While GRE scores are welcome, they are optional. In addition, a minimum of two years of experience in the field of study is preferred, though not required.

Students interested in the Conservation Biology track are expected to have studied Biology, Ecology, Chemistry, and Statistics as undergraduates. If students have not previously taken courses in these subjects, in most cases they will be allowed to do so during their first year of study.

Students interested in Self Designed studies must submit a Self Designed Concentration proposal. An outline will be forwarded to each student requesting consideration for this study.

**Note:** The Master of Science in Environmental Studies features a rolling admissions policy. Those interested in enrolling can apply at any time during the year.

Materials may also be sent electronically to mastersprogram@greenmtn.edu. Please make sure the subject line of an electronic application specifies 'Application for MSES Admission'.

The online application for the MSES program is available at masters.greenmtn.edu.

**Application materials should be sent to the following address:**
Office of Graduate Programs
Green Mountain College
One Brennan Circle
Poultney, VT 05764

The graduate studies candidates will be notified upon completion of their application and the appropriate Admissions Committee will then review their application. If the committee requires additional information the candidate will be contacted with that request. Upon acceptance the candidate will be notified and sent the documents needed to enroll.

Choose one option

Option 1 - Thesis
ENV 6031 Thesis – Writing 2

Option 2 – Applied Professional Project
ENV 6033 Applied Professional Project – Writing 2

Option 3 – Capstone Portfolio
ENV 6034 Capstone Portfolio 3

Credits: 21

Concentration
Students will declare one of the following concentrations:

1. Conservation Biology
2. Writing & Communications
3. Self-Designed

Credits: 15

Total credits for a Master of Science in Environmental Science: 36

* The Natural Systems Ecology course can be waived for students who have had a minimum of two courses at the undergraduate level in ecology. At least one of these courses must be at the junior/senior level. In the case of such a waiver, the student would add an elective for a total credit count of 36 credit hours.

**The Practicum may be waived for students in Options 1 or 2 above if a student can demonstrate s/he is already well-connected with professionals in his/her bioregion. In the case of such a waiver, the student would add an elective for a total credit count of 36 credit hours

MSES Concentrations
1. Conservation Biology
This track is designed to help students who anticipate working as professionals in most environmental fields, where knowledge of both science and policy are essential. In addition to the core credits required of all majors, students on the Conservation Biology track will take six credits of context courses and another nine credits of applied courses. These applied courses will be chosen in close consultation with the student’s advisor, so as best to create a comprehensive program tracking the student’s interests and career plans.

Context Courses
BIO 6040 Conservation Biology 3

Choose one course:
BIO 6050 Conservation Genetics 3
BIO 6082 Biogeography 3
ENV 6050 Environmental Administrative Law 3
Applied Courses
Choose three courses:
The remaining nine credit hours are free electives. Students may choose to take additional context courses or other courses or independent studies.

2. Writing & Communications
This program is designed to help students who intend to work as professional communicators in the environmental field. In addition to the core credits required of all majors, students on the Writing & Communications track will take six credits of context courses and another nine credits of applied courses. These courses will be chosen in close consultation with the student’s advisor, so as best to create a comprehensive program tracking the student’s interests and career plans.

Context Courses
COM 6040 Environmental Communications 3
Choose one course:
COM 6081 Media Advocacy Workshop 3
ENV 6040 Traditions of Natural History Writing 3
ENG 6070 Field Journaling 3

Applied Workshops
Choose three courses:
The remaining nine credit hours are free electives. Students may choose to take additional context courses or other courses or independent studies.

3. Self-Designed
This final track is intended to help students earn an MS in Environmental Studies by working with an advisor to craft a curriculum tailored to their own needs. In addition to the core credits required of all majors, students on the Self-Designed track will take an additional fifteen credits, striving for balance between essential contexts and local application. These courses will be chosen in close consultation with the student’s advisor, so as best to create a comprehensive program tracking the student’s interests and career plans.
Master of Science in Resilient and Sustainable Communities

Program Director: Laird Christensen
Professor of English Literature and Environmental Studies
Director of the Master of Science in Resilient and Sustainable Communities

The MRSC program requires 39 hours of Green Mountain College graduate credits. All of the courses are three credits and last six weeks. While course sections are capped at 20 students, to support student learning and allow for individualized feedback from the course instructor, most of our sections range from 10-18 students, creating an ideal online learning environment.

Typically, students take one class at a time, though in some cases they can seek with permission from the program director to take more than one class during a six-week term. Most students take the core courses in the same order, which serves to lay important foundational perspectives, as well as build relationships within each cohort. Students complete projects by applying the skills and knowledge learned to their local communities, while engaging with their instructors and one another in asynchronous discussions.

Learning Outcomes for the MRSC Program

Through the MRSC program, students will:

1. Be able to synthesize the knowledge necessary to plan sustainable and resilient communities, including land-use policy, economic development, energy production, food systems, resource management, and their local natural history in preparation for creating actionable plans for communities in their bioregion.

2. Develop a suite of sophisticated skills related to applying theoretical knowledge to problem-solving in a community.

3. Be able to evaluate the specific challenges that a community faces—environmental, as well as economic and political—in becoming more sustainable and resilient, and to research and develop effective approaches for addressing these challenges.

4. Prepare to help create revitalized, sustainable, and more resilient and socially just communities by developing their skills in leadership, group organization, and conflict resolution.

Students’ achievement of the above learning outcomes will be assessed through the following:

1. By successfully completing each of the core courses (RSC 5010, RSC 5020, RSC 5030, RSC 5040, RSC 5050, RSC 5060, and ENV 6077) students will demonstrate that they have achieved the synthesis of knowledge stated in the first learning outcome.

2. By successfully completing the applied assignments of the core courses, students will demonstrate that they have achieved the second and third stated learning outcomes.
3. During the capstone process, students incorporate contemporary issues, theories, and skills required to create more resilient and sustainable communities, and will demonstrate the application of these skills and knowledge while achieving the second and third learning outcomes.

4. By successfully completing RSC 5070, RSC 5080, and, when possible, RSC 6020, students will demonstrate that they have achieved the fourth learning outcome.

5. Admission to the M.R.S.C. program will be based upon a review of the following criteria:

- All undergraduate and graduate level transcripts. A bachelor's degree is required, and a degree in a relevant field is preferred. (GPA of at least 3.0 is preferred).
- Current résumé or CV.
- Three letters of reference.
- A personal essay answering the following questions: (1) Why the prospective student wants to pursue an MS in Resilient and Sustainable Communities; (2) How the advanced degree aligns with career goals; (3) How the student will manage completing personal, professional, and academic priorities during his/her advanced course of study.
- Evidence of two or more years of work experience in the field of study is preferred. We do not accept students directly from undergraduate programs unless there are significant extenuating circumstances.
- GRE or GMAT scores (not required).

Note: The M.R.S.C. program features a rolling admissions policy. Those interested in enrolling can apply at any time during the year.

Materials may also be sent electronically to mastersprogram@greenmtn.edu. Please make sure the subject line of an electronic application specifies 'Application for MRSC Admission'.

The online application for the MRSC program is available at masters.greenmtn.edu.

Application materials should be sent to the following address:
Office of Graduate Programs
Green Mountain College
One Brennan Circle
Poultney, VT 05764

The graduate studies candidates will be notified upon completion of their application and the appropriate Admissions Committee will then review their application. If the committee requires additional information the candidate will be contacted with that request. Upon acceptance the candidate will be forwarded a link to the GMC Graduate Studies
Enrollment Handbook, which contains all the documents that are needed to enroll in the graduate program.

Total credits for a M.S. in Resilient and Sustainable Communities: 39

Master of Science in Sustainable Food Systems

Program Director: Philip Ackerman-Leist
Associate Professor of Environmental Studies
Director of the Master of Science in Sustainable Food Systems Program

The M.S.F.S. requires 39 hours of Green Mountain College graduate credits.

Learning Outcomes for the MSFS Program

Through the MSFS program, students will:

1. Acquire a solid foundation in the historical context, economic realities, ecological considerations, policy aspects, and cultural values that have created our contemporary food systems, including regional differences.
2. Develop a solid understanding of best practices in sustainable agricultural production in the vegetable, fruit, and livestock sectors, including the distinctions in production methods within different scales and bioregions.
3. Develop the ability to analyze different components of a food system—production, processing, distribution, preparation, and consumption—in order to assess that food system’s strengths and weaknesses with regard to economic, ecological, and social sustainability.
4. Learn how to leverage food system change within businesses, regional communities, the nonprofit sector, and/or policymaking organizations.
5. Learn to use the interdisciplinary knowledge from their masters coursework to research, analyze, and develop potential solutions for food system issues in their home bioregions.
Students’ achievement of the above learning outcomes will be assessed through the following:

6. Each student will keep and maintain an archived electronic portfolio containing documents and materials from their coursework that demonstrate their mastery of the student learning outcomes.

7. Annually, a random sampling of these portfolios will be reviewed by a team of program faculty to assess the achievement of program goals. The program director will then submit a report based on this assessment to the dean of the faculty and the provost.

8. Course level assessment will involve review by the program director, the individual instructors, and the students. In each graduate course that is taught, students will be required to complete an evaluation both of the course and the instructor. This evaluation will be in the form of an anonymous online survey. Once the instructor has submitted final grades for the course, the results will be shared with the instructor, program director, dean of the faculty, and provost. In addition, faculty will submit their own assessment of student learning and a plan for course improvement. Course amendments and updates will be made as a result of this process and will be reviewed first by the program director to ensure that the content and design is appropriate and that a clear link exists between the learning outcomes and assessments. For all courses in each program, student learning outcomes be updated, and the link between assignments and the learning outcomes has been strengthened and made more explicit. This change will improve the quality of faculty assessment of student learning. (Note: This process is parallel to the course level assessment in the MSES program.)

9. It is anticipated that the MSFS capstone project will demonstrate student achievement of most, if not all, of the learning outcomes. Therefore, as part of the capstone project, each student will submit a narrative self-evaluation outlining how the capstone project demonstrates student success in achieving each of the learning outcomes. This narrative self-evaluation will be accompanied by a completed quantitative survey focused not only on each students’ sense of success in achieving each outcome in the capstone project but also of how the sequence of MSFS courses did or did not contribute to the student’s ability to adequately achieve these learning outcomes. The program director will review these narrative self-evaluations and the quantitative survey results to determine programmatic successes and challenges, to be summarized in a report to fellow MSFS faculty colleagues, the dean of the faculty, and the provost. This process will be particularly critical in the initial years of the program since course content, sequencing, and delivery must be adapted to meet the learning outcomes for the program—and some learning outcomes may also need to be reviewed and altered according to the resulting data, both quantitative and qualitative.

Admission to the M.S.F.S. program will be based upon a review of the following criteria:
• All undergraduate and graduate level transcripts. A bachelor's degree is required, and a degree in a relevant field is preferred. Most entering graduate students will have completed a bachelor's degree in food and nutrition, agriculture, business & marketing, environmental studies, food studies, policy, or other related discipline. (GPA of at least 3.0 is preferred).
• Current résumé or CV.
• Three letters of reference.
• A personal essay answering the following questions: (1) Why the prospective student wants to pursue an MS in Sustainable Food Systems; (2) How the advanced degree aligns with career goals; (3) How the student will manage completing personal, professional, and academic priorities during his/her advanced course of study.
• Evidence of two or more years of work experience in the field of study is preferred. We do not accept students directly from undergraduate programs unless there are significant extenuating circumstances.
• GRE or GMAT scores (not required).

Note: The M.S.F.S. program features a rolling admissions policy. Those interested in enrolling can apply at any time during the year.

Materials may also be sent electronically to mastersprogram@greenmtn.edu. Please make sure the subject line of an electronic application specifies 'Application for MSFS Admission'.

The online application for the MSFS program is available at masters.greenmtn.edu.

Application materials should be sent to the following address:
Office of Graduate Programs
Green Mountain College
One Brennan Circle
Poultney, VT 05764

The graduate studies candidates will be notified upon completion of their application and the appropriate Admissions Committee will then review their application. If the committee requires additional information the candidate will be contacted with that request. Upon acceptance the candidate will be forwarded a link to the GMC Graduate Studies Enrollment Handbook, which contains all the documents that are needed to enroll in the graduate program.

**Total credits for a Master of Science in Sustainable Food Systems:** 39
Academic Resources

From the moment students enroll at Green Mountain College a rich and vigorous array of academic support services are available to enhance the learning experience.

Griswold Library

The heart of the academic community is Griswold Library. Renovated in 1999, the library offers a variety of services to students, faculty, staff and community members. The library actively collects both print and non-print materials. In addition to books, print periodicals, indices, videos, DVDs and micro-reproductions, the library provides access to a vast and ever-growing array of on-line research services such as electronic journals, books, newspapers, legal documents and research documents. Special collections include the Welsh Collection, Vermontiana and the college’s archives. The college’s participation in interlibrary loan programs assures that all students and faculty have access to the collections of libraries from around New England and the world.

Students in our distance learning graduate program will have access not only to some of the finest environmental studies and sustainable business faculty in the country, but also to GMC's Griswold Library, whose resources include more than 24,000 on-line book titles, robust electronic research tools including Lexis-Nexis Academic Universe, JSTOR, Proquest Research Library, and Oxford Reference Online Premium, more than 1,000 current and back-filed periodicals, Interlibrary Loan services, and the 72,000-volume main collection (available to distance learners). Reference and research assistance from professional library staff is also available.

Computer Facilities and Information Technology

Every Green Mountain College graduate student is provided with an e-mail account, Internet access, and access to the campus network. All students are networked through the campus servers, providing 24-hour access to the on-line research services to which the library subscribes.

Academic Policies

Graduation Requirements
To qualify for a degree, a student shall meet the following conditions:

1. The student must be enrolled in a specific program of study and be committed to such a program on the last day of drop/add in the final semester of study during which the degree will be awarded.
2. To receive a degree, students must declare their candidacy no later than the first day of their last term.
3. Only bona fide candidates, as certified by the Registrar prior to graduation, may receive degrees at commencement exercises. Students who complete their degree
requirements in the summer or after the fall semester will qualify for degrees at the next scheduled commencement.

4. The student must register for courses that satisfy the degree requirements as printed in the graduate catalog. The College will honor the commitments made in the Catalog issue of the year a student is first matriculated. If a student’s matriculation is interrupted voluntarily or involuntarily, the student is required to meet the requirements of the Catalog current at the time of readmission.

5. The student must earn a minimum of 36 semester hours of credit.

6. The student must successfully complete all general requirements in an approved program of study.

7. The student must achieve a minimum cumulative grade point average of 2.00.

8. The student must fulfill all financial obligations due to the College, including the graduation fee.

**Enrollment Status**

**Full-Time Matriculant**
Defined as being enrolled in a course and seeking a degree.

**Non-Matriculant**
Applications are accepted for admission on a non-matriculated basis. Non-matriculated students must provide an official transcript indicating a bachelor’s degree completion and a non-matriculate student application.

Non-matriculated graduate students may register on a course by courses basis as long as space allows. Their ability to enroll in classes depends on whether there is space available in the program. Non-matriculated admission does not guarantee admission into the graduate program as a matriculated student. To become a matriculated student they have to fulfill the application requirements for new matriculated students.

Credits earned during non-matriculated participation can be used toward their master’s degree if they wish to become a matriculated student.

Non-matriculated students are not eligible for institutional aid or federal financial aid and payment must be received at the time of registration.

Students may register for courses up until one week prior to the start of the course. If a student fails to register by the deadline, they may contact the Registrar’s Office to register late. Students will have until the third day of the course to register late. A $25 late fee will be assessed for all late registrations.

**Continuous Enrollment Policy**
In accord with best practices for online learning, graduate students are expected to maintain continuous enrollment throughout their program at Green Mountain College. Students who are not registered during any six-week term are not officially GMC students.
Any students who choose not to take a regular course during a term or an independent study, thesis, or practicum will be administratively registered in BUS 5000, ENV 5000, RSC 5000, or SFS 5000, a non-credit bearing course, in order to maintain enrollment status. The enrollment fee for this course is $25 for each six-week term. Enrolling in this course allows the student to maintain uninterrupted access to library resources, email, and faculty advising. In addition, it may prevent depletion of the student’s six-month grace period prior to repayment of student loans.

The $100 course fee will be waived if there is no course available that satisfies a degree requirement and the student cannot enroll in the capstone or thesis.

Students are only automatically enrolled in continuous enrollment for a maximum of four consecutive terms. After that point students must petition the Office of Graduate Programs for additional continuous enrollment status, and to discuss their degree completion timeline.

If a student chooses not to enroll in a course and does not wish to be enrolled in BUS 5000, ENV 5000, RSC 5000, or SFS 5000, then the student must contact the Office of Graduate Programs to request a leave of absence. The student will no longer be considered enrolled at the College for the term, but will be able to register for future courses. (See Withdrawal and Leave of Absence Policy)

**Degree Plan Policy for MSES Students**

Following the completion of their first course, all MSES students submit a degree plan, which must be approved by the program director. The degree plan will provide students with a timeline for completion of all of their degree requirements. By looking at the course offerings on the academic calendar for the next two years, students will determine which terms they will take all of the courses required for their MSES degree – including core, context, and applied/elective courses.

When students with a self-designed concentration submit a degree plan layout they will provide a brief description of their chosen concentration which must be approved by the program director. Once approved by the program director, this plan will be kept on file with the Registrar’s Office. When the student applies for graduation, they will be held to the requirements outlined in the degree plan layout that is on file with the Registrar’s Office.

Degree plans can be changed by submitting a revised plan to the graduate programs office and having the revisions approved by the program director.

**Grading System**

Credits are granted in semester hours. Grades of Pass (P) or Withdrawal (W) carry no negative quality point conditions, and such credits attempted are not used in calculating
averages. A grade of Pass (P) indicates a grade of C- or better. A grade of No Pass (NP) indicates that the student has not passed the course, but is not used in calculating averages.

**W** (Withdrawal)
Recorded on the permanent record to indicate that the student withdrew from the course. This designation has no impact on the student’s grade point average.

The last day to Withdraw from a course.

Students will have until the last day of week 4 to withdraw from a course. After this day, the student will receive whatever grade they have earned in the course.

**I** (Incomplete Work)

The following are appropriate reasons for giving an incomplete:
1. The student is ill and this can be satisfactorily documented.
2. There is a death or illness in the student’s family and this can be satisfactorily documented.
3. Extenuating circumstances.

The steps below will be adhered to when granting an incomplete for a course:

A student may formally request an incomplete by completing the Graduate Program Request for Incomplete form, no later than the last day of class. Any appropriate documentation must be supplied within five business days of the request.

This form will be sent to the instructor who will review the request. If approved, the instructor will complete the Graduate Programs Incomplete Approval form and outline any stipulations. All incompletes must be completed within 3 weeks of the last day of the course. An incomplete not cleared by the deadline will result in an administrative grade of “F” assigned to the student for that course.

If a faculty member becomes ill, dies, or leaves the institution, then any final decision about grades will be determined by the program director.
The Academic Standards Committee may consider a student’s appeal and recommend steps for resolution when a dispute arises in the process of granting an incomplete under the categories listed above.

When incompletes are completed, the action appropriate for the student’s standing becomes effective as soon as possible: Academic Honors, Warning, Probation, etc.

**Incomplete Policy for Thesis/Capstone Proposal**

Students unable to complete their thesis or capstone proposal in the session period may request an incomplete from their advisor. If the extension is approved, the student may have an additional six weeks to complete. Extensions can be renewed up to four times for a maximum time limit of twenty-four weeks. During this time the student will be administratively registered for continuous enrollment, if not otherwise enrolled in a course. If the proposal is not finalized and approved within that time, the student will be required to reregister for the proposal course. At that time, the incomplete for the original proposal course will be administratively changed to “no grade”.

**Incomplete Policy for Thesis/Capstone**

Students who do not complete thesis/capstone projects during the term in which they register for thesis/capstone may request an incomplete from their advisor. Students will have three months to finalize their projects and have them approved by the thesis/capstone committee. If students cannot complete the project within three-months, they can request an extension for an additional three months, with approval from their advisor. The extension may be renewed up to four times for a maximum time limit for thesis/capstone completion of twelve months from the date the initial Incomplete was issued. During this time the student will be administratively registered for continuous enrollment. If the project is not finalized and approved by the appropriate committee within that time, the student will be required to reregister for the thesis course. At that time, the incomplete for the original thesis course will be administratively changed to “no grade”.

The steps below will be adhered to when granting an incomplete for a **Capstone or Proposal**:

A student may formally request an incomplete by completing the Graduate Program Request for Incomplete form, no later than the last day of the Capstone class. Any appropriate documentation must be supplied within five business days of the request.

This form will be sent to the instructor who will review the request. If approved, the instructor will complete the Graduate Programs Incomplete Approval form and outline any stipulations.

**R (Repeated Course)**

Used on semester grade reports and permanent records to indicate that a course has been repeated. Students wishing/needing to repeat a course may do so only under the following conditions:

1. A student may repeat (at Green Mountain College) any course failed at Green Mountain College provided the course is offered during the student’s tenure/
2. A student may repeat (at Green Mountain College) any course passed at Green Mountain College one time only.
3. All grades a student receives at Green Mountain College will appear on the permanent record.
4. In computing the cumulative grade point average, the best grade received at Green Mountain College will be used.
5. If a course is repeated after receipt of a passing grade, no gain in total credit will occur.
6. Upon proper approval of the Registrar in advance, a student may repeat at another accredited college/university a course failed at Green Mountain College. If the student receives a grade of C- or better, the student may transfer in the credit to satisfy program/credit requirements.
7. If a student chooses to repeat a course and withdraws from the course during the published drop period a grade of W will be entered on the student’s permanent record.

Grade Point Averages
Grade point averages are computed by multiplying the number of credits attempted in each course by the number of quality points awarded for the letter grade. Total quality points are then divided by the total number of credits attempted minus those designated as Pass/Transfer.

Grades
Grades are officially recorded at the end of each course. Students will have access to their unofficial transcripts online through MyGMC. A final grade may not be changed by reexamination or additional work.

Attendance
In order to be in attendance during an online week, students must post at least one message on two separate days during the online week. If students miss one week or more, they may be automatically withdrawn and will not be eligible to receive credit or earn a letter grade. Please note that the attendance requirement is different from the participation requirement.

Participation
Participation is very important in online courses. Participation consists of messages that students post above and beyond graded assignments. This generally means the messages that students send as replies to messages from classmates and the instructor.

Participation will be counted only in the main discussion list. Messages posted in the drop-box, Chat Room, or in Learning Team newsgroups will not count towards class participation scores. Please note that both quantity and quality are important considerations when it comes to participation. A message that says simply, "I agree," for example, would not constitute participation since it does not add anything of substance to the discussion.
Withdrawal and Leave of Absence
Students wishing to take a leave of absence or choosing to withdraw from Green Mountain College should initiate the process with the Office of Graduate Studies. The process includes an exit interview with the appropriate Program Director or his/her designee and the completion of paperwork that assists the student in taking care of all campus business prior to leaving. All paperwork must be returned to the Office of Graduate Studies. The official date of leave or withdrawal will be set as the last known academic activity date (i.e. class attendance).

If a student leaves the College without initiating the withdrawal process, the College is entitled to determine the official date of withdrawal. It is the student’s responsibility to take care of all business and College-related matters prior to leaving Green Mountain College.

A student may request to take a Leave of Absence from their program by following the same procedure outlined above. Leaves will only be granted for medical reasons or other extenuating circumstances to those students in good academic and financial standing with the college.

Administrative Withdrawals
Student postings are required on a minimum of two days per week. When no participation occurs, an automatic warning will be emailed to the student on day 6. On day 1 of the following week, the student will automatically be emailed that he or she has missed one week, and that if another week is missed, the student will be withdrawn. Faculty approval is required to finalize the withdrawal.

Academic Standing
Students must maintain a 2.0 cumulative GPA to be considered in good standing. If the cumulative GPA falls below 2.0, the student will be placed on academic probation with the possibility of dismissal. Students dismissed for academic cause may apply to the Office of Graduate Programs for readmission. Readmitted students will return to the College on academic probation and may be expected to meet requirements of the Catalog current at the time of readmission.

Readmission
Green Mountain College will not automatically readmit a student who has withdrawn from the College or whose LOA has lapsed. Students who desire to reenter Green Mountain College following a withdrawal must initiate a process for reentry into the College by completing the Application for Readmission form and submitting it to the Office of Graduate Programs. The appropriate Program Director will consider the student’s reentry on an individualized basis.

Credits From Other Institutions
Transfer Students
A student who has attended another accredited institution prior to entering Green Mountain College must provide official transcripts to the Graduate Studies Admissions office for evaluation. Credits for acceptable course work must carry a grade of C- or better for the student who has a cumulative transfer GPA of 2.00 or higher. For those students whose cumulative GPA is less than a 2.00, all acceptable course work must carry a grade of C or better. Quality points are not transferable. A maximum of 7 credits may be transferred into the MBA program. A maximum of 9 credits may be transferred into the MSES, MSFS, and MRSC programs.

Transfer Credit After Matriculation
A student who elects to attend a session at another accredited institution with the object of clearing credit deficiencies from the record or for the purpose of accelerating an educational program must confer with the Registrar prior to session enrollment. If a student fails to seek such approval, the credits earned elsewhere may not be applied to a degree program at Green Mountain College. Credits for acceptable course work must carry a grade of C- or better and appear on an official transcript. Quality points are not transferable. The College may limit the number of credits a matriculated student may transfer from another institution.

Registration Procedures
Once a student has submitted all necessary documents to the Graduate Studies Admissions office and placed their deposit, they will be automatically registered for their first course. For subsequent course registrations, the Registrar’s Office will notify students through email with instructions on where to find the necessary website. Students will be able to register online with a username and password that is provided by the Registrar's Office. After the student has registered online, they will be able to review their registration history online.

Students must register for all classes through the College’s Web Registration Module. Students may register for courses up until one week prior to the start of the course. If a student fails to register by the deadline, they may contact the Registrar’s Office until the third day of class to register late. A $25.00 late registration fee will accompany all late registrations. (See Other Fees and Charges)

Academic Integrity
Green Mountain College expects all members of its community to conduct themselves with honor and integrity. All members of the community are encouraged to assist the College by reporting suspected violations of academic integrity to appropriate administrators, faculty, or staff. Behavior that is detrimental to the College’s role as an educational institution is not acceptable and requires attention by all citizens of its community. To minimize academic dishonesty, both students and instructors should take all necessary measures to prevent its occurrence.
Students have an obligation to themselves and to their fellow students to uphold the integrity of their institution and of higher learning itself by:

1. Refusing to participate, either directly or indirectly, in acts of dishonesty, and
2. Discouraging such acts by others. One who collaborates with another in an act of dishonesty shares the guilt of the offense.

The Faculty has a responsibility to assist in protecting the integrity of the degrees, which the College grants by:

1. Informing students of the cheating/plagiarism policy and of any specific interpretation of that policy particular to a given course, and
2. Making every effort to ensure that work submitted by students honestly represents their own efforts.

Cheating, in all of its manifestations, is a dishonest activity and contrary to the basic goals of learning. Students must be fully aware of what constitutes academic dishonesty; claims of ignorance, of unintentional error, or of academic or personal pressures cannot be used to justify or rationalize dishonest acts.

Sanctions
Each instructor has the authority and responsibility of determining the assessment of penalties for academic dishonesty within the context of their course. If a breach of conduct is particularly serious it may warrant action beyond the context of the course in which case an instructor may refer the case to the Dean of Faculty.

The following is a list of the types of behaviors that are defined as examples of academic dishonesty and are therefore unacceptable. Attempts to commit such acts also fall under the term academic dishonesty and are also subject to penalty.

The following acts constitute prohibited conduct:

**Plagiarism**
Presenting as one’s own work the work of another person (e.g., the words, ideas, information, data, evidence, organizing principles or style of presentation of someone else). Plagiarism includes paraphrasing or summarizing without acknowledgement, submission of another’s work as one’s own, the purchase of prepared research or completed papers or projects, and the unacknowledged use of research sources gathered by someone else. Failure to indicate accurately the extent and precise nature of one’s reliance on other sources is also a form of plagiarism. The student is responsible for understanding the consequences for violating College regulations.

Examples of plagiarism include: failure to acknowledge the source(s) of even a few phrases, sentences or paragraphs; failure to acknowledge the source(s) (quoted, paraphrased or summarized) of major sections of passages in the paper or project; failure to acknowledge the source(s) of a major idea or the source(s) for an ordering principle central to the paper’s or project’s structure. In the preparation of research papers, reports, essays, compositions...
and speeches, students will generally utilize information gained from others. It is absolutely necessary to acknowledge these resources.

**Cheating on examinations**
Giving or receiving unauthorized help before, during, or after and examination. Examples of unauthorized help include collaboration of any sort during an examination (unless specifically approved by the instructor); collaboration before an examination (when such collaboration is specifically forbidden by the instructor); the use of notes, books, or other aids during an examination (unless permitted by the instructor); arranging for another person to take an examination in one’s place; looking upon someone else’s examination during the examination period; intentionally allowing another student to look upon one’s exam; the unauthorized discussing of test items during the examination period; and the passing of any examination information to students who have not yet taken the examination.

**Multiple Submission**
Submitting substantial portions of the same work for credit more than once, without prior explicit consent of the instructor(s) to whom the material is being (or has in the past been)

** Forgery**
Imitating another person’s signature on academic or other official documents (e.g., the signing of an adviser’s name to a registration form). Misrepresenting or fabricating information in an academic exercise or assignment (e.g., the false or misleading citation of courses, the falsification of experimental or computer data, etc.).

**Sabotage**
Destroying, damaging, or stealing another’s work or working materials (including lab experiments, computer programs, term papers, or projects).

**Unauthorized Collaboration**
Collaborating on projects, papers, or other academic exercise if regarded as inappropriate by the instructor(s). Although the usual faculty assumption is that work submitted for credit is entirely one’s own, standards on appropriate collaboration vary widely among individual faculty and different disciplines. Students who want to confer or collaborate with one another on work receiving academic credit should make certain of the instructor’s expectations and standards.

**Bribery**
Offering or giving any article of value or service to an instructor or College staff member in an attempt to receive a grade or other benefits not legitimately earned or not available to other students in the class.

**Theft, Damage or Misuse of Library or Computer Resources**
Removing uncharged library materials from the library, defacing or damaging materials, intentionally displacing or hoarding materials within the library for one’s unauthorized
Confidentiality of Records
The following Green Mountain College policy in regard to student records is established in conjunction with the Family Educational Rights and Privacy Act of 1974 (Buckley Amendment).

I. Records of an Academic Nature
A file folder for each current student is maintained in the Registrar’s Office. This record consists of the student’s application for admission, secondary school transcripts; transcripts of coursework transferred from other colleges, and standardized test scores. In addition, current information such as grades, academic status, attendance, and Green Mountain College courses are included in the record. These file folders are retained for a period of approximately 10 years after the last date of attendance.

Members of the faculty and administrative officers have access to the above records as needed for the purpose of evaluation of student achievement and determining special needs of individual students for educational counseling.

II. Placement Records
The Career Counseling Office also maintains a file on each student who officially registers for the placement service. The file contains the registration form completed by the student, a completed copy of the student’s resume, and references provided by persons at the request of the student. The Dean of the Faculty has access to the above records for the purpose of evaluation of student achievement as well as for determining special needs of individual students is required for educational staff.

III. Access Rights to Other than Students, Faculty, & Administrative Staff
A. Authorized Federal officers auditing federally supported education programs and state officials to whom information from student records is required by statute to be disclosed.

B. College officers processing a student’s financial aid application

C. Official accrediting organizations financial records of parents.

D. Confidential material of record before January 1, 1975, if such material is not used for purposes other than for which it was specifically intended.

VI. Students Right to Waiver of Access
The student may waive his/her right of access to confidential academic statements (i.e., recommendations) by signing the appropriate waiver form. The waiver shall be valid only if:
A. Upon the student request, the names of all persons making confidential recommendations must be provided.

B. Such recommendations or statements are used only for the purpose for which they were specifically intended. The College may not demand such a waiver as a condition of admission, award of financial aid, or the receipt of any other services and/or benefits.

VII. Challenges to the Content of Educational Records
A hearing may be requested by students to challenge the content of educational records, in order to ensure that the records are not inaccurate, misleading, or otherwise in violation of the privacy or other rights of students, and to provide an opportunity for the correction or deletion of any such inaccurate or misleading or otherwise inappropriate data contained therein and to insert in such records a written explanation of the student in regard to the content of such records. Such hearings would be conducted by the Provost on the content of educational records and by the Dean of Student Life on placement records.

VIII. Directory Information
A. Information including student’s name, address, telephone number, date and place of birth, major field(s) of study, participation in officially recognized activities and sports, weight and height of athletic team members, dates of attendance, degrees and awards received, most recent educational institution attended, and other similar information is classified as directory information at Green Mountain College and may be released to the public for specific purposes at the discretion of the College.

B. To prevent disclosure of any or all categories of directory information, the student must submit in writing a Request to Prevent Disclosure of Directory Information. A new form for nondisclosure must be completed for each academic year.

NOTE: The above guidelines are related to the Family educational Rights and Privacy Act of 1974. The complete document is available for use by all at the Griswold Library.

Transcripts
There is a transcript fee of $5.00 per copy. Requests for such transcripts must be made in writing to the Registrar and be signed by the student. Verbal requests cannot be accepted. No transcripts will be issued if the student has any outstanding financial obligations to the College.

Nondiscrimination Policy
Green Mountain College does not discriminate on the basis of race, color, religion, national origin, sex, sexual orientation, age, disability, or veteran’s status in its recruitment, admissions, or employment activities.

Campus Computing Policy and Code of Ethics
Every user of Green Mountain College’s computing facilities has the fundamental right to network privacy. Each user of the campus network is accorded the privilege of a fair share
of computing resources, including a personal network folder, a GMC email account, and a reasonable portion of shared Internet bandwidth. Use of computing resources is a privilege, not a right, and is granted with restrictions and responsibilities for their use. Misuse of College computer resources and violations of this Computing Code will result in revocation of this privilege. Each user code and associated password belongs to an individual. All use must be in accordance with the policies set forth in this document, and more explicitly with the policies found on the Information Technology website: http://www.greenmtn.edu/computer_services.aspx. Network logon and password information is confidential and is never to be shared. Electronically stored files are presumed to be private and confidential unless the owner has explicitly made them available to the public. Use of the network or electronic mail facilities for transmitting anonymous, rude, abusive, harassing, or malicious messages is unethical and will result in suspension of network access.

While GMC’s computing systems and network are vigorous and safe, they are not invulnerable to deliberate abuse. Knowledge of a special password or any weaknesses in the established security systems must not be used to deliberately degrade or impair GMC’s computing systems, its network, its personal computers, nor deprive other users of any GMC computing resources.

When necessary for the maintenance of a system or network, GMC Computer personnel may restrict availability of shared resources. It may also be necessary to enter a user’s .les to investigate and correct reported problems. Use of resources associated with College computer accounts for direct financial gain, for instance selling or commercial consulting, is unethical and not permitted.

Additional information about IT Services is available on this College web site: http://campus.greenmtn.edu/it/.

Financial Information
Contact: Student Accounts Office

MBA Tuition - $30,340 based on 37 credits at $820 per credit
MSES Tuition- $25,200 based on 36 credits at $700 per credit
MSFS Tuition- $27,300 based on 39 credits at $700 per credit
MRSC Tuition - $27,300 based on 39 credits at $700 per credit

Billing Schedule and Payment of Charges
The Business Office services all student financial accounts with the College. The primary functions of the Business Office include student billing and collection, student refunds, payment options and student account management. In addition, they provide assistance to students in resolving questions about and difficulties with their billing.

Once a student is registered into a course the Business Office is notified and provides the student with a Graduate Program Invoice.
Students will receive their tuition bill from the Business Office either electronically or by mail.

**ALL** student accounts and financial aid issues **MUST** be resolved prior to the first day of class. If these issues are not resolved, online students will not be given full access to the online course. If a student has not cleared their financial obligations by the third day of class, all access to the course will be terminated.

**Payment Options**
- Credit Cards – The College accepts VISA, MasterCard and Discover.
- Payment can be made by cash or check.
- Accounts may be settled with financial aid funds.

**Refund Policy**
Students will be reimbursed for any class they drop prior to the first day of class. There will be no reimbursement for a class after the first day.

**Other Fees and Charges**
A late registration fee of $25.00 will be assessed for any registration that occurs less than one week prior to the start of the course up until three days after the start of the course. Late registration fees must be paid electronically at the time of registration.

**Refund Policy**
The following refund schedule reflects the requirement that the College commit its financial resources to its faculty and services for the entire year.

**Students Refund Policy for Recipients of Federal Financial Aid**
Students receiving federal financial aid will receive a refund based on the current policy specified by Title IV regulations. When students use financial aid to pay for tuition and fees, any refundable amount is returned to the appropriate Title IV program (i.e., Pell Grant, Federal Supplemental Educational Opportunity Grant, and PLUS and Stafford loans). The full amount of a student’s refund will be used to restore funds to the Title IV federal account from which aid was received, regardless of any unpaid balance that may still be owed to the College. Students considering withdrawing from the College during a semester are encouraged to contact the Financial Aid Office.

Students seeking Financial Aid must complete a FAFSA. All requested documentation should be returned to the Financial Aid Office before the start date in order to ensure that the student’s financial situation is in order and he or she can be granted full online access. If the student fails to turn in the requested documentation, it may cause a reduction in previously awarded financial aid.

Students must register to be eligible to receive institutional financial aid. To remain eligible for awarded financial aid for subsequent years, students must maintain satisfactory academic progress and/or the required 2.0 minimum GPA.
Federal Financial Aid Guidelines – Graduate Program
All students applying for federal financial aid must be matriculated. A matriculated student is defined as being enrolled in a credited course. If a student enrolls in a course and then withdraws from the course, withdrawal calculations are done and a percentage of the disbursed financial aid must be returned and any incurred costs are the sole responsibility of the student to pay based on federal guidelines. No refunds for tuition are given for administrative withdrawals, including, but not limited to, disciplinary action that results in the suspension or dismissal of a student.

Refund Policy for Recipients of Federal Financial Aid: When students use financial aid to pay for tuition, fees, and on-campus housing and board, any refundable amount is returned to the appropriate Title IV program (i.e., Pell Grant, Federal Supplemental Educational Opportunity Grant; and PLUS, and Stafford loans) based on the current policy specified by Title IV regulations. The full amount of a student’s refund will be used to restore funds to the Title IV federal account from which aid was received, regardless of any unpaid balance that may still be owed to the College. Students considering withdrawal from the masters program during a course “term” are encouraged to contact the Financial Aid Office.

Course Descriptions

Biology (BIO)

Natural Systems Ecology BIO 5010
This course provides a rigorous overview of six major organizing areas for study of ecology: physiological ecology, dynamics of energy and element cycles, population ecology, population interactions, community ecology, and evolutionary ecology—the latter especially as it relates to conservation issues. Each major section of the course begins with one or more case studies, then proceeds to the theoretical underpinnings that allow us to understand the ecological processes in question. Students will read a body of current literature and produce a significant paper centered on ecological issues of their bioregion. This course may be waived if the student has a minimum of two ecology courses at the undergraduate level, at least one of which is upper level.

Conservation Biology BIO 6040
In this course students will study the history and application of conservation biology, a new field in the life sciences. Specific topics will include how has the field emerged and changed, the specific areas of study that made this field possible (biogeography, for example), historical and legal landmarks, current challenges, common lab and field techniques, design of study, and limitation of certain techniques. Students will read a significant body of current literature in the field and produce a paper that applies their
knowledge of conservation biology to a problem in their local bioregion. Prerequisite: BIO 5010 Natural Systems Ecology.

3 credits

**Conservation Genetics**

BIO 6050

Students in this course will explore the evolutionary genetics of natural populations (small and large) and study how genetic diversity is characterized, maintained, or—as is often the case—lost due to inbreeding depression and population fragmentation. The course will move from theory to practice to examine speciation, phylogenetic tree construction, management of wild and captive populations, and population viability analysis. Students will read a body of current literature in the field and produce a significant paper focused on conservation issues in their bioregion. Prerequisite: BIO 5010 Natural Systems Ecology

3 credits

**Field Botany**

BIO 6073

A review of topics in plant anatomy, morphology, physiology, evolution, systematics, and field methods to provide students with the botanical knowledge and skills they need to support work in ecological research, plant conservation, forestry, range management, sustainable agriculture, ecological landscape design, land use planning, education, and related fields. Prerequisite: BIO 5010, Systems Ecology.

3 credits

**Forest Ecology**

BIO 6074

This course explores the primary ways in which organisms interact with abiotic components of North America’s various forest communities, from northern hardwood forests to temperate rainforests. Of particular interest are the processes—both natural and anthropogenic—that determine how organisms are distributed throughout a forest community. By gathering data and applying generalized patterns in their local ecosystems, students will develop a hands-on knowledge of ecosystem processes that provides a fundamental context for understanding modern ecosystem management. Students will read a body of current literature in the field and produce a significant paper focused on issues pertaining to forests in their bioregion. Prerequisite: BIO 5010 Natural Systems Ecology

3 credits

**Ecological Restoration**

BIO 6075

This course is designed to provide students with a description of the principles and practice of ecological restoration. The historical context of the field and foundational definitions will be examined as well as the recommended best practices to design and implement an ecological restoration project. The social and human dimensions of restoration will be explored within the context of resolving common conflicts and tradeoffs that occur between the science and practice of ecological restoration. The direction of the field of ecological restoration for the future will be discussed in the face of global climate change and the Anthropocene. Several case studies will be introduced throughout the course and
the course will culminate in a final assignment that asks students to critically examine a restoration project or study within their bioregion.

3 credits

Biogeography

This is an advanced course in the study of historic and current organism distributions. It treats both the patterns of these distributions and the possible causes suggested by these patterns. Because causes of distribution range from geologic to evolutionary processes, the study of biogeography is necessarily very broad, therefore, this class examines questions of distribution in historic, evolutionary, ecological, and geological perspectives. The last segment of the course will be devoted to the role biogeography plays in conservation of species and systems. Students will research regional problems and bring their expertise to bear by proposing a potential solution. Prerequisite: BIO 5010 Natural Systems Ecology

3 credits

Business (BUS)

Communication Management

This course provides new graduate students with an introduction to graduate-level communication strategies for academic success in a distance learning environment. In addition, this course examines issues and organizations that affect business and nonprofit organizations in the external environment of the organization. Topics include communication skills; academic rigor; scholarly practices; individual and group presentation techniques; graduate-level research tools; critical thinking strategies and skills; stress and time management; team work dynamics; an introduction to economics, regulatory, political, social and legal elements in the external environment.

1 credit

Sustainable Organization Management:

A Triple Bottom Line Perspective

This course introduces the concepts of triple bottom line management and corporate social responsibility including the history and how they are changing the role and expectations of business in society. In addition, this course introduces the core management functions of planning, organization, leadership and control and how these functions are applied in sustainable organizations. Prerequisite: BUS 5010 Communication Management or by permission of instructor.

3 credits

Organizational Behavior in Sustainable Business

This course examines the human element in sustainable organizations. This course will study human behavior at the individual, team and organizational level and examine organizational design from multiple perspectives, paying particular attention to how companies can create systems that support social and environmental responsibility. Topics include human resource management, organizational behavior, managing change, the role of leadership in encouraging organizational innovation and adaptability, and optimizing
individual performance and motivation. Prerequisite: BUS 5010 Communication Management.

**Sustainable Operations and Systems Thinking**

This course explores operations management in sustainable organizations and the application of systems thinking in the design and implementation of successful management strategies. Topics include process analysis, supply chain management, quality management, service systems management, and how systems respond to attempts to bring about beneficial changes. Students will also learn about leverage: how small changes in just the right part of a system can produce big results. Prerequisite: BUS 5010 Communication Management.

3 credits

**Sustainable Marketing**

This course examines the principles and practices of marketing in a sustainable organization and marketing’s role in the creation and management of relationships with customers and other stakeholders. Students learn how to create effective marketing strategies and plans that support the sustainable organization’s mission and goals. Topics include identifying target audiences and needs, developing authentic positioning, and designing products/services, pricing, distribution, promotion and communications for sustainable brands and organizations. Prerequisite: BUS 5010 Communication Management.

3 credits

**Statistics & Quantitative Methods for Sustainable Organization Management**

This course prepares the manager to use the principles of data analysis and their applications for management problems. Topics include business research, techniques of classification, summarization, and display of data; application of probability models for inference and decision making; and operations research. Prerequisite: BUS 5010 Communication Management.

3 credits

**Stakeholder Economics & Sustainable Performance Management**

This course examines principles and tools in economics for managers to use in making decisions in sustainable organizations. The focus is on the application of economics in operating and planning problems using information generally available to the manager. Topics include pricing; market structures; expansions and recessions; monetary policy; and the new economy. New measures of value added that address sustainability and other stakeholder group impacts are examined. Prerequisite: BUS 5010 Communication Management.

3 credits

**Accounting for Sustainable Organization Management**

This course examines the principles of financial and managerial accounting for effective managerial decision-making and assessment of the financial strength of sustainable
organizations. Discussions will include the essentials of cost accounting; minimizing the costs and risks posed by operations, developing effective operational planning and capital budgeting processes and managing more effectively a firm’s investments. Prerequisite: BUS 5010 Communication Management; BUS 5060 Statistics & Quantitative Methods; and BUS 5070 Stakeholder Economics, or by permission of instructor.

3 credits

**Ethical Issues & Legal Environment**

BUS 5090

This course examines how the legal environment shapes managerial decision-making and the ethical issues that emerge. Topics include the regulatory environment, contracts, business torts, partnership and corporations, anti-trust, environmental law, employment law, and ethical considerations in business from a stakeholder theory perspective. Prerequisite: BUS 5010 Communication Management.

3 credits

**Financial Measures of Value Added**

BUS 5110

This course examines the principles of finance and financial techniques for effective management decision-making in the organization. The focus is understanding, analyzing, and integrating financial information as an aid to making financial decisions. Topics include forecasting; cash and capital budgeting; working capital management; non-profit metrics, and risk management. Prerequisite: BUS 5080 Accounting for Managers.

3 credits

**Leadership, Values, and Decision Making**

BUS 6010

This course explores issues surrounding how and why senior leaders set and deploy organizational values, short and long-term directions, and performance expectations that achieve sustainable organization practices. The focus is on leadership approaches, organizational learning and social and environmental stewardship. Prerequisite: Completion of core course sequence.

3 credits

**Competitive and Strategic Management: A Stakeholder Approach**

BUS 6020

This course examines classic competitive strategy frameworks and the application of these frameworks as well as emerging strategy for sustainability frameworks in the development and implementation of competitive strategy. The emphasis is on integrating the multiple stakeholder approach into the development and implementation of effective strategy that creates sustainable competitive advantage. Prerequisite: BUS 6010 Leadership, Values, and Decision Making.

3 credits

**Capstone Project I**

BUS 6090

The field application project is a capstone course in which the graduate student evidences the ability to apply GMC MBA learning to an applied project that integrates finance, marketing and other functional disciplines to result in a strategy design and
implementation plan that supports sustainable organizational effectiveness. Working with the instructor advisor, the student will develop a research topic, prepare a written report and present the proposed topic to the MBA Capstone Committee. Upon approval of the topic by the Capstone Committee the student will have satisfied the requirements of the BUS 6090 course and be approved to proceed with the research activities necessary to deliver the final project in BUS 6091.

Prerequisite: Completion of core courses, or by permission of instructor.

1 credits

Capstone Project II

BUS 6091

The field application project is a capstone course in which the graduate student evidences the ability to apply GMC MBA learning to an applied project that integrates finance, marketing and other functional disciplines to result in a strategy design and implementation plan that supports sustainable organizational effectiveness. Working with the instructor advisor, the student will conclude the BUS6090 approved project, prepare a written report and present the findings to the MBA Capstone Committee.

Prerequisite: Completion of BUS 6090.

2 credits

Communication Studies (COM)

Environmental Communications

COM 6040

Through readings and online discussion of communication theory, audience and rhetorical analysis, and persuasion in the mass media, students will identify mechanisms and professional practices required to communicate environmental and science policy issues. Case studies of key environmental issues in various bioregions and organizations will provide a sampling of communication models, including informational and public policy reports, objective and persuasive media reporting, and advocacy campaigns. Students will research and conduct an environmental communications campaign that incorporates public policy and planning processes, assessment of scientific data and claims, and audience analysis. This project will incorporate a pre-campaign analysis of audience and core concepts; the authoring of a coordinated body of messages, publications, and media; a timeline and budget; and an assessment process to evaluate the campaign’s success.

3 credits

Grant Writing Workshop

COM 6070

Students in this class will begin by researching private foundations, public grants, and other grant-making funding sources, and determining application opportunities and requirements. Students will then practice drafting proposals to a variety of grant-making institutions, with focus on statements of need, program descriptions, and budgets. Finally, students will focus on grant-related maintenance strategies, including tracking implementation guidelines and match requirements, drafting grant reports, and monitoring multi-year or multiple-partner projects. Prerequisite: COM 6040 Environmental Communications or equivalent.
Science Writing Workshop

This course focuses on reporting and writing science articles for technical and general-interest publications. After study of general writing principles based on the work of such science writers as Rachel Carson, Loren Eiseley, Stephen Jay Gould, and Jared Diamond, students will identify a range of science articles in a specific field and summarize topic selection, writing style, structure, and use of explanatory and inquiry techniques. Based on their own expertise and interest, students will select a specific topic or topics, arrange interviews with researchers and policy experts, and write a series of articles for a variety of audiences. Articles will integrate research abstracts, field reporting, interviewing, and analysis of science and technology in the context of social and natural systems. Prerequisite: COM 6040 Environmental Communications or equivalent.

Online Content Creation

A convergence of online media tools and platforms allow communicators to create a vibrant messaging environment. In Online Content Creation, students learn the web publishing skills needed to curate online content and publish original work. Students will survey bioregional content, assess a variety of platforms and delivery processes, and curate media, write blog posts, and produce original digital media while developing a thematic online portfolio.

Media Advocacy Workshop

Successful advocacy campaigns rely on explanatory and persuasive messages published in a range of media for diverse audiences. In this workshop-focused course, students develop expertise in research, writing, editing, media production and strategic communication analysis. Writing and media assignments develop messages on bioregional and global issues and include presentations, audio/video scripts, media productions, news releases, commentary, blog posts and websites. A portfolio of work features explanatory and persuasive publications that support civic engagement, sustainability, and environmental advocacy campaigns.

English (ENG)

Traditions of Natural History Writing

From the Systema Naturae of Carl Linnaeus to the works of contemporary writers such as Barry Lopez, Annie Dillard, and Gary Paul Nabhan, this course will explore the many ways in which scientists and writers have represented, classified, and drawn insights from the nonhuman world. Supplemental readings in environmental history and philosophy will provide students with the context necessary to theorize how and why modes of literary naturalism changed when they did. While students will become familiar with Thomas Lyon’s “Taxonomy of Nature Writing” and use its principles to analyze a broad selection of
texts, they will also learn to diagram the chains of narrative strategies and rhetorical approaches in classical and contemporary examples of natural history writing, leading toward the production of an article-length critical analysis.

Field Journaling

This course’s emphasis on discovering, carefully observing, and accurately recording information in the field provides a natural foundation for further environmental writing workshops. Guided by naturalists such as Clare Walker Leslie, Ann Zwinger, and Frederick Franck, students not only will practice sustained field inquiry—with special emphasis on sketching as a technique of identification and classification—but they will also consider the epistemological implications of their habits of perception. Throughout the class, students will create thorough profiles of objects and organisms discovered in the field; coursework will culminate in a portfolio of these profiles, prefaced by a reflective essay exploring the challenges and insights encountered during the process of dedicated field investigation. Prerequisite: BIO 5010 Natural Systems Ecology or equivalent.

Environmental Poetry Workshop

While the inspiration that leads to the production of poetry cannot be taught, the craft that makes such inspiration transferable can. Beginning with an introduction to the varieties of environmental poetry, students will analyze the interplay of sound, imagery, narrative, rhythm, and authorial presence in selected works from such contemporary poets as Gary Snyder, Pattianne Rogers, William Stafford, and Mary Oliver. As the students determine the possibilities enabled by different approaches, comparing their interpretations with ecocritical analyses from relevant journal articles, they will also record their own impressions of the world beyond their walls, producing a minimum of twenty pages that will then be critiqued in online workshop and revised accordingly. As in all of our workshops, students will learn about the process of publishing their work, identifying possible homes for their poems and producing appropriate cover letters. Prerequisite: ENG 6040 Traditions of Natural History Writing or equivalent; ENG 6070 Field Journaling is highly recommended.

Natural History Writing Workshop

In this course students will learn how to convey information about local ecology in ways that are entertaining and accessible to an audience of interested laypeople. In a sense, then, this is a course in translation: the relevant geological and biological facts of a region must be extracted from professional journals and textbooks, stripped of jargon, and recast in fresh and lively prose. Students will find models in the work of authors such as John McPhee and Terry Tempest Williams on their way to producing an essay that has the primary purpose of educating an audience about some aspect of the local environment. Guided workshops will help students work through such typical problems as how to make
geological time easily comprehensible and how to draw readers into fields of knowledge usually left to scientists. By the end of the course, students will produce a portfolio of at least twenty-five pages of polished natural history writing. As in all of our workshops, students will learn about the process of publishing their work, identifying possible homes for their essays and producing appropriate cover letters. Prerequisite: ENG 6040 Traditions of Natural History Writing; ENG 6070 Field Journaling is highly recommended.

3 credits

Environmental Studies (ENV)

Environmental Law and Policy

This course is an introduction to the laws and policies pertaining to issues such as population, energy, pollution, land management, waste disposal, economic growth, and ecosystem management, as well as some of the theoretical underpinnings of how economic and ecological burdens and benefits are distributed within society. Students will consider historic and modern common-law mechanisms for managing land use, and modern environmental statutes including federal land management regimes, consumer protection statutes, pollution prevention regimes, and the intersection of energy regulation and transportation law with environmental laws. Using the National Environmental Policy Act’s Environmental Impact Statement process as an organizing principle, students will consider a variety of environmental issues, statutes, and case law concerning environmental regulation in the United States.

3 credits

Environmental History and Philosophy

This course provides a systematic historical and philosophical analysis of prevailing Western perspectives of the environment. Drawing on the work of historians such as Max Oelschlaeger, Carolyn Merchant, and Donald Worster, students will begin by exploring the Classical and Judeo-Christian roots of Western thought, after which they will consider how attitudes toward the nonhuman world have evolved since the collapse of the hierarchically structured Medieval world and in the wake of modern science. Students will trace current debates in environmental ethics and history through journals of record in these fields, honing their skills in research and argumentation before defending their own solutions to environmental problems in their local bioregions.

3 credits

Environmental Leadership and Community Involvement

This course will examine theories of leadership, group and community dynamics, grassroots and community organizing, and methods of dispute resolution. Students will first examine historic social conflicts and the mechanisms that ultimately resolved those conflicts, with particular focus on the labor, consumer, and environmental movements, and international differences in the ways such movements played out in disparate political and social systems. Through extensive use of case studies and simulations, students will compare traditional methods of resolving disputes (from violence to litigation) to Alternative Dispute Resolution processes (negotiation, mediation, arbitration, etc.), and
analyze decision-making by parties, judges, policy-makers, and neutral third-party decision makers.

3 credits

Bioregional Theory and Practice

ENV 5040

The central goal of this course is to provide students with the experience and direction necessary to understand the multidimensional complexity of their home bioregions in a comprehensive fashion. This will require that each student research the natural and cultural histories of her local ecosystem, compiling a thorough annotated bibliography of resources that provide an enhanced understanding of the region’s geology, botany, and wildlife biology, as well as human population dynamics, cultural practices, and environmental impacts. As a part of this project, students will identify contemporary environmental issues and professional resources in the local bioregion.

3 credits

Regional Analysis of Global Environmental Issues

ENV 5070

This course will provide an overview of the science behind several major global environmental issues within the context of the physical environment of Earth, and link these issues to local and regional manifestations. Topics of interest may include global climate change, resource extraction, water & air quality, urbanization, geohazards, and pollution; however, the topic selection will be student driven. The main goal of the course is for students to engage in rigorous analyses of regional data that can be compared with global trends and analyses. Students will obtain primary data & peer-reviewed journal articles, research and analyze global case studies and trends, develop their own regional case studies, and participate in peer-review discussion of regional examples.

3 credits

Practicum

ENV 6010

The practicum is an applied experience in which the student is expected to integrate herself into a community of professionals in her local bioregion. The student will construct a working and learning environment in which knowledge and skills gained from graduate courses (and personal experiences) are brought to bear on a significant issue or set of issues, within the context of the student’s Environmental Studies concentration. Final products of the practicum will vary, depending upon track and goals as stated by the student in the practicum proposal. In cases where a student is already well-integrated into the local community of professionals, the practicum can be waived and an additional elective taken to complete the 36 hour credit count. Prerequisite: Completion of core and context courses; approval of practicum proposal by Program Director prior to enrollment.

3 credits

Thesis - Proposal

ENV 6030

Each student will complete a significant, original scholarly or creative work in her area of concentration. (Specific requirements for each thesis will be negotiated in meetings with the student’s thesis committee.) After approval of prospectus by the thesis committee, the student enrolls in ENV 6030 and independently produces an original thesis that applies
what the student has learned to her local ecosystem. Ideally, in addition to contributing to the body of work already available in relevant areas of knowledge, the thesis will also contribute to the student’s career goals.

1 credit

**Thesis – Writing**

This is a continuation of ENV 6030 Thesis – Proposal.

2 credits

**Applied Professional Project – Writing**

This is a continuation of ENV 6032 Applied Professional Project-Proposal.

2 credits

**Capstone Portfolio**

Following completion of the coursework and practicum the student will draw upon the completed materials to create a portfolio that demonstrates accomplishments in accordance with program goals and a set of goals the student has drafted for himself. Typically a student will decide at the end of the first year if she is moving into the non-thesis track and will articulate particular goals at that time. The portfolio is tied together by a substantive reflective paper, which describes the case for the academic integrity of her coursework, the activities she has engaged within the coursework, and the connection to the student’s career.

3 credits

**Environmental Administrative Law**

This class examines how administrative agencies at the federal and state levels make environmental policy decisions, and how other agencies, corporations, nonprofits, and private individuals can influence those decisions. The class analyzes the administrative process, rule-making and adjudicative procedures, official notice-and-comment standards, and judicial review of agency decisions. Students will also study how legislative directives are translated into regulations, and the limitations on agency action.

Prerequisite: ENV 5011 Environmental Law and Policy.

3 credits

**Public Resource Management**

Students in this course will focus on the management of federal lands throughout the United States, and the method by which different agencies manage this land. Students will review public policy and current management regimes for forests, grasslands, mineral and coastal resources with primary focus on the lands administered by the United States Forest Service and agencies within the Department of Interior. The course will review multiple management options for these areas, including resource-extraction, recreation, wildlife management and wilderness management regimes, and consider the statutes that control—and sometimes conflict with—such management strategies.

Prerequisite: ENV 5011 Environmental Policy and Law
Wildlife Law
This course will review the major statutes and agencies that control and manage wildlife at the state, national, and international levels. With particular emphasis on the intersection of multiple management agencies and statutory responsibilities, students will consider the network of competing protections and jurisdictions that impact wildlife management in the United States. The class will also consider larger biodiversity protection regimes that sometimes conflict with traditional wildlife management. Specific emphasis will be placed on research requirements around wildlife, including collection permits, endangered species and invasive transportation regulations, and international treaties concerning the ban or control of transportation of artifacts and samples.
Prerequisite: ENV 5011 Environmental Policy and Law

Land Use Planning and Policy
This course reviews traditional legal controls over land in the United States, including zoning ordinances and subdivision regulations at the local level, and state-wide planning initiatives found in states such as Vermont and Oregon. Students will consider those land-use laws and societal factors that contribute to blighted inner cities and suburban sprawl, develop familiarity with relevant policies in their own bioregions, and consider modern planning techniques and emerging trends in sustainable and resilient community development. Prerequisite: ENV 5011 Environmental Policy and Law

Natural Resource Management (NRM)

Geographic Information Systems
This is an introductory course that will cover the historical development, theoretical basis and practical application of geographic information systems (GIS) technologies. This course will accomplish these goals by providing you with an understanding of: (1) numerous data formats and how to obtain freely distributed data, (2) a variety of open-source and freely distributed GIS software packages, (3) how to manage and construct GIS databases, and (4) applied GIS through case studies and individualized projects.

Resilient and Sustainable Communities (RSC)
A Bioregional Approach to Communities
This course provides students with the experience and direction necessary to understand their own communities within a bioregional context. This requires students to identify and map where they live in terms of geology, biology, and climate, rather than relying on political borders, and to research and interpret the natural and cultural histories of their regions in order to understand how their own bioregions enable some possibilities of human community development while limiting others. In addition to researching and
writing a Deep History of their bioregions, students will compile an annotated list of resources that provide an expanded temporal representation of the region’s geology, botany, wildlife biology, human population dynamics, cultural practices, and environmental impacts.

3 credits

Climate Change and Resource Impacts

RSC 5020
This course will provide students with an overview of the major drivers of global environmental change, such as climate change, resource scarcity, loss of habitat and agricultural land, population growth, increasing consumption patterns in globalized economy, and water issues. Students will learn how to interpret and evaluate predictive models, explore ways in which existing models might contribute to their understanding of their own bioregions, and create an inventory of resources with specific bioregional relevance as a way of planning adaptively for resilience in preparation for disruptions.

3 credits

Sustainable Economic Development

RSC 5030
Beginning with an introduction to theories of economic and community development, students will evaluate classic and alternative economic models and become familiar with existing policies that may facilitate or hinder sustainable economic development. Within a context informed by political economy, resource management, and property rights, students will work through local application of the challenges of planning for equality and resilience, while learning to analyze indicators and measurements of economic progress and well-being.

3 credits

Energy and the Environment

RSC 5040
Energy use, in multiple forms and applications, is the primary driver of accumulating greenhouse gas emissions in the Earth’s atmosphere, leading to a changing global climate. While people may have a general understanding of the link between energy use and global warming, few understand how our energy systems evolved, the social and institutional inertia that perpetuates our dependence on fossil fuel sources of energy, and the steps necessary to begin the essential transformation to a sustainable energy future. This course provides a comprehensive coverage of these issues with a particular emphasis on preparing students to promote sustainable energy initiatives in their own communities.

3 credits

Theories of Sustainability and Resilience

RSC 5050
Beginning with the history of theories of sustainability and resilience, as well as their standard applications in policy and practice, this course will examine critiques of these theories as paradigms and goals of community development, and evaluate responses to these critiques from within the sustainability movement. Students will explore ways of measuring sustainability and resilience, and consider how the language associated with these theories can be used in setting community goals and motivating stakeholder action.

3 credits
Regional and Community Food Systems  RSC 5060
This course will provide overviews of the history of industrial food production and theories of sustainable agriculture before asking students to assess the "sustainability" of current food systems at different scales, to become familiar with laws and policies determining food production and distribution, and to evaluate diverse models of more sustainable food production. As an applied way of understanding local issues of food security and sovereignty, students will identify the range of resources relevant to regional food production and analyze local foodsheds in a bioregional context.

Leadership and Organizational Transformation  RSC 5070
In this course students will develop an applied understanding of group behavior, leadership ethics, and the process of cultivating an organizational culture, while learning to understand various types of organizations from a systems perspective. Working in teams, students will evaluate different approaches to guiding the evolution of organizational structures and objectives; explore ways to cultivate the capacities of personnel; learn to address obstacles to transformation through effective interventions; and become proficient in analyzing and managing internal and external communications.

Social Justice and Community Mobilization  RSC 5080
Students in this course will identify social and cultural barriers to community involvement, considering how issues of race, class, ethnicity and gender affect community decision-making. Students will research local laws, policies, and customs that may contribute to—or inhibit—community mobilization, while learning to assess community health and needs, build and manage effective coalitions, evaluate methods for community development according to scale, and measure community participation and success in achieving sustainability.

Community Arts, Recreation, and Public Spaces  RSC 6000
Students in this course will explore the theoretical foundations and practical expressions of community art and recreation projects, with special attention to how such community cultural development contributes to the larger project of creating more resilient and sustainable communities. In particular, students will explore the possibilities of instigating such projects in their own communities, evaluating their potential in terms of increasing social cohesion and providing a range of health benefits.

Transportation Systems  RSC 6005
This course examines existing and potential transportation methods, policies, and infrastructures at the municipal level, with a special interest in energy efficiency, safety, and resilience in the face of possible disruptions. Students will use their own communities as case studies, collecting and interpreting data and developing a preliminary set of recommendations.
Community Health RSC 6010
After becoming familiar with existing health systems and agencies at the local, state, and national levels, students will produce an inventory of environmental, social, and behavioral health-related issues in their own communities, and investigate the possibilities for collaboration between agencies, health advocacy groups, and relevant community organizations.

3 credits

Emergency Management and Communication RSC 6015
Students in this course will develop a bioregional risk analysis examining floods, wildfires, earthquakes, climate change impacts, public health crises, and food and social inequities. Students will gain knowledge and skills required of emergency managers and communicators by staffing virtual scenarios that apply principles of the National Incident Management System (NIMS), and by developing resiliency-based pre-plans and responses for immediate and long-term impacts of emergencies.

3 credits

Dispute Resolution, and Creative Problem-Solving RSC 6020
This course will introduce students to a range of contemporary theories about the nature of conflict, the principles of Alternative Dispute Resolution (ADR), and the role of creative problem-solving in facilitation and mediation. Students will explore the laws governing mediation in their own bioregions, and will work in teams to develop the skills needed to facilitate agreement among a range of stakeholders in participatory planning processes.

3 credits

Topics in Green Design RSC 6025
Rotating through a series of special topics, this course provides students an opportunity to explore a variety of approaches to green design. Some topics might include, but are not limited to, permaculture, sustainable architecture, design and build projects, and creating comprehensive plans for communities.

3 credits

Thesis - Proposal RSC 6030
Each student will complete a significant, original scholarly or creative work in her area of concentration. (Specific requirements for each thesis will be negotiated in meetings with the student’s thesis committee.) After approval of prospectus by the thesis committee, the student enrolls in RSC 6030 and independently produces an original thesis that applies what the student has learned to her local ecosystem. Ideally, in addition to contributing to the body of work already available in relevant areas of knowledge, the thesis will also contribute to the student’s career goals.

1 credit

Thesis – Writing RSC 6031
This is a continuation of RSC 6030 Thesis – Proposal.

Applied Professional Project - Proposal  
RSC 6032
Each student will complete a significant applied work in his area of concentration. (Specific requirements for each project will be negotiated in meetings with the student’s committee). After approval of prospectus by the project committee, the student enrolls in ENV 6032: Applied Professional Project - Proposal and independently produces an original proposal for work that applies what the student has learned to her local ecosystem. Ideally, in addition to contributing to the body of work already available in relevant areas of knowledge, the thesis will also contribute to the student's career goals. Writing is continued in RSC 6033.

1 credit

Applied Professional Project – Writing  
RSC 6033
This is a continuation of RSC 6032 Applied Professional Project-Proposal.

2 credits

Capstone Portfolio  
RSC 6034
Following completion of the coursework and practicum the student will draw upon the completed materials to create a portfolio that demonstrates accomplishments in accordance with program goals and a set of goals the student has drafted for himself. Typically a student will decide at the end of the first year if she is moving into the non-thesis track and will articulate particular goals at that time. The portfolio is tied together by a substantive reflective paper, which describes the case for the academic integrity of her coursework, the activities she has engaged within the coursework, and the connection to the student’s career.

3 credits

Sustainable Food Systems (SFS)

Contemporary Food Systems  
SFS 5010
The complexities of the food system are enormous, and the tools for understanding the system and its dynamic historical shifts are interdisciplinary. This survey of local, regional, national, and international food systems will provide students with a basic understanding of how to analyze individual elements of the systems and their interrelationships and how to begin assessing the "sustainability" of those food systems at different scales and in different bioregions.

3 credits

Bioregional Theory and the Foodshed  
SFS 5020
Bioregional theory and the emergent idea of foodsheds are complementary and provide a context for defining areas of study and change. Students' understandings of their own bioregions and foodsheds will inform the entire program of study for this masters program.
As students hone their methods of analysis for studying their own bioregions and foodsheds and subsequently deepen their understandings of these areas, they will also broaden their understandings of distant and larger food systems through the cross-comparisons made with the peers in their MSFS cohort.

3 credits

History of American Agriculture  SFS 5030
Comprehending the present state of the American food system, predicting potential shifts, and acquiring the tools required for leveraging change all require a historical context for how the contemporary food systems emerged. This survey of American agriculture will move from Native American diets and sustenance practices to the modern era of industrial food production, including American agriculture's role in an increasingly globalized food system.

3 credits

Theory and Practice of Sustainable Agriculture  SFS 5040
Premised upon a basic understanding of food system dynamics, bioregional impacts upon food production, and the historical emergence of the current paradigm, this course will provide an historical overview of the theory and practice of sustainable agriculture in the U.S., with an emphasis on soil health, farm systems, crop and livestock selection, animal husbandry practices, natural and synthetic chemical use, energy resources, mechanization options, and genetic manipulation. Driven by a constant interplay between science and values as they respond to a series of historical problems in agricultural practices, sustainable agriculture will be explored as a field in flux, constantly challenged by the inherent difficulties of manipulating natural ecosystems for the production of food.

3 credits

Vegetables and Fruits: Farm to Plate Sustainability  SFS 5050
Beginning with the differing challenges of farming with annual crops versus perennials, this course will explore current thinking, trends, and production methods for vegetables and fruits before moving into the often hidden methods and difficulties in processing, storing, distributing, preparing, and consuming these foods. Various business models and management systems will be explored, with a careful eye toward "sustainable value chains" that focus on profitability, environmental concerns, and consumer satisfaction.

3 credits

Livestock: Farm to Plate Sustainability  SFS 5060
Livestock production starts with complex plant-animal relationships and moves into a series of environments: ethical realms, a labyrinthine regulatory world, and multiple marketplaces. Regardless of personal dietary choices, a clear understanding of different livestock production methods and varying farmgate to dinner plate scenarios is critical, and this course is designed to help students see the decision-making junctures in meat production and consumption, junctures that can determine different definitions and understandings of "sustainability" in this complicated aspect of the food system.
Contemporary Food and Agriculture Movements:
Regional, National, and International
Changes in food systems are driven not only by technological, economic, and policy developments, but also by emerging values. These values can transform into social action, media focus, policy changes, and—relatively recently—certification programs and processes and marketplace innovation and incentives. This chronological overview of food movements in the US and abroad from the 19th century forward will enhance student understanding of how food and agriculture movements begin, develop, transform, and sometimes wane.

Food Law and Policy
Food Law and Policy
If the marketplace seems daunting in the call for transformation of food systems, the policy arena seems even more challenging. After clarifying the different jurisdictions of local, state, federal, and international entities in creating and enforcing laws and policies related to food and agriculture, this course will survey a variety of key policy decisions at these different levels, policies that can either perpetuate or change the status quo in the food system realm. As the largest funding initiative developed and mandated by Congress, the Farm Bill will be a requisite point of emphasis and reflection throughout the course.

Agriculture and Energy
Food and agriculture comprise a substantial portion of our national energy budget, and there are ample ways to reexamine our food systems in order to find energy savings and to utilize more appropriate energy resources that minimize fossil-fuel consumption. This course will examine energy use in the various sectors of the food system, assessing points of key concern and interest and analyzing different methods of rectifying these concerns. The relationship between energy choices and agricultural yields, farmer profits, food access, and food affordability will be emphasized throughout the course.

Sustainable Marketing
Marketing matters immensely in the food system, in the promotion both of products and of ideas. Whether it involves the marketing of a new product or marketing geared toward the proposed elimination of an old idea, finding leverage at the appropriate points, for the appropriate audience, and with the best communications and media skills is as critical for advocates as it is for entrepreneurs or managers. This course will present students with key marketing concepts for entering and transforming various aspects of the food system and each student will develop a marketing plan for a particular product or concept.

Sustainable Organization Management
Whether it is on the farm, in the business world, or the nonprofit sector, management is
the key to long-term success of any venture, and the dynamic nature of food systems requires strategic management skills that ensure sustainability. With a focus on the triple bottom line, this course will require students to develop a business plan in the sector in which they plan to work in coming years.

### Turning Traditions into Markets SFS 6060
Based at Brunnenburg Castle in the Italian South Tirol, a historical nexus point between northern and southern European agricultural and culinary traditions, students will examine how savvy entrepreneurs, in concert with regional governments and tourism initiatives, have linked food traditions to the marketplace, providing farmers and consumers with the opportunity to share in this unique blending of cultural history, planned landscape ecology, and regional markets. Incorporated in the course will be an overview and critique of how the European Economic Community (EEC) and its highly-regulated economic and food safety practices have impacted these traditions and their associated markets.

### Agricultural Biodiversity in the Marketplace SFS 6065
As the world marketplace becomes increasingly globalized and food products become more homogenized, the opportunities for farmers, chefs, marketers, and consumers to work together in conserving agricultural biodiversity are growing. These strategic collaborative efforts to conserve heirloom seeds, heritage fruits, rare breeds of livestock, and wild edibles are an important response to the rampant genetic erosion of our global food system. Furthermore, the loss of historical and cultural knowledge associated with these items threatens the traditions that ultimately support the plants and animals themselves. Included in the course will be a review of emerging techniques in genetic manipulation and the role of these technologies both in supporting and threatening these resources.

### Capstone Proposal SFS 6090
Offered in the September intersession, this course provides a timeframe for the student and assigned advisor(s) work together to develop a Capstone Proposal, based on the Capstone Concept submitted by the student in August. This course culminates in a Capstone Proposal that is approved by the advisor(s) and MSFS Director.

### Capstone Project SFS 6091
As the concluding experience in the MSFS program, the Capstone Project requires an integration of applicable skills and knowledge acquired through the program into a project that applies to the student’s anticipated professional/academic trajectory. Culminating in an applied professional project or a thesis, the capstone is a networking and professional development experience, rooted in research and applied knowledge. In many ways, the Capstone Project is a strategic step between the MSFS program and a student’s career and/or academic aspirations.
